

TITLE: The full Birch and Swinnerton-Dyer Conjecture for specific elliptic curves.

ABSTRACT: I will finish describing some major results of recent years on the BSD conjecture for elliptic curves, then give a live demo in which I verify the conjecture for the curve 141a. I will also describe what is left to do in order to verify the conjecture for all other curves in Cremona's book. This talk is part 2 of a talk I gave last week.
