Contents

Linear Algebra and Matrix Analysis **5**
Vector Spaces . . . 6
Linear Independence, Span, Basis . . . 8
Change of Basis . . . 9
Constructing New Vector Spaces from Given Ones . . . 10
Dual Vector Spaces . . . 11
Dual Basis in Finite Dimensions . . . 11
Linear Transformations . . . 12
Projections . . . 15
Nilpotents . . . 16
Dual Transformations . . . 20
Bilinear Forms . . . 21
Norms . . . 25
Continuous Linear Operators on Normed Linear Spaces . . . 27
Equivalence of Norms . . . 28
The Norm Equivalence Theorem . . . 29
Norms induced by inner products . . . 30
Closed Unit Balls in Finite Dimensional Normed Linear Spaces . . . 31
Completeness . . . 33
Completion of a Metric Space . . . 35
Series in normed linear spaces . . . 36
Norms on Operators . . . 37
Bounded Linear Operators and Operator Norms . . . 37
Consequences of the Hahn-Banach theorem . . . 40
The Second Dual . . . 40
Adjoint Transformations . . . 40
Completeness of $\mathcal{B}(V, W)$ when W is complete . . . 40
Analysis with Operators . . . 41
Operators in Finite Dimensions . . . 42
Transposes and Adjoints . . . 43
Norms on Matrices . . . 43
Consistent Matrix Norms . . . 44
Families of Matrix Norms . . . 44
Condition Number and Error Sensitivity . . . 45

Finite Dimensional Spectral Theory . . . 48
Unitary Equivalence . . . 52
Schur Unitary Triangularization Theorem . . . 52
Cayley-Hamilton Theorem . . . 53
Rayleigh Quotients and the Courant-Fischer Minimax Theorem . . . 54
Non-Unitary Similarity Transformations . . . 56
Jordan Form . . . 57
Spectral Decomposition . . . 59
Jordan Form over $\mathbb{R}$ . . . 60
Non-Square Matrices . . . 62
Singular Value Decomposition (SVD) . . . 62
Applications of SVD . . . 65
Linear Least Squares Problems . . . 67
Linear Least Squares, SVD, and Moore-Penrose Pseudoinverse . . . 67
LU Factorization . . . 73
QR Factorization . . . 76
Using QR Factorization to Solve Least Squares Problems . . . 78
The QR Algorithm . . . 78
Convergence of the QR Algorithm . . . 79
Resolvent . . . 81
Perturbation of Eigenvalues and Eigenvectors . . . 84
Functional Calculus . . . 91
The Spectral Mapping Theorem . . . 94
Logarithms of Invertible Matrices . . . 96

Ordinary Differential Equations (ODEs) 99
ODEs . . . 99
Reduction to First-Order Systems . . . 99
Initial-Value Problems (IVP's) for First-order Systems . . . 100
The Contraction Mapping Fixed-Point Theorem . . . 102
Local Existence and Uniqueness for Lipschitz f . . . 103
The Picard Iteration . . . 105
Local Existence for Continuous f . . . 107
The Cauchy-Peano Existence Theorem . . . 108
Uniqueness . . . 110
Uniqueness for Locally Lipschitz f . . . 111
