

Reading:

- Sections 4.10, 4.11.

Written Assignment (due 5/13/11):

Write up complete solutions to *all five problems* on the midterm exam. Here are the ground rules:

- If you're satisfied with your score on one or more of the exam problems, just write "USE EXAM SCORE" on your homework paper for that problem, and attach your exam. (If you don't want to use any of your exam scores, you don't need to attach your exam.)
- You're welcome to use your books and notes, and to talk with each other about how to do the problems. *But you may not look at anyone else's exam paper, or show your exam paper to anyone else in the class.*
- When writing proofs, be sure to follow the instructions on the handout "Some Remarks on Writing Mathematical Proofs," available on my home page (www.math.washington.edu/~lee).
- Your percentage score on this assignment will be averaged with your percentage score on the exam, and that will become your midterm exam score for the record.
