

Name _____

TA: _____

Section: _____

Instructions:

- Your exam contains 4 problems.
- Your exam should contain 5 pages; please make sure you have a complete exam.
- Box in your final answer when appropriate.
- Unless stated otherwise, you **MUST** show work for credit. No credit for answers only. If in doubt, ask for clarification.
- Your work needs to be neat and legible.
- You are allowed one 8.5×11 sheet of notes (both sides). Graphing calculators are **NOT** allowed; scientific calculators are allowed.
- Round off your answers to 2 decimal places, unless you are asked for exact answers.

Problem #1 (15 pts) _____

Problem #2 (15 pts) _____

Problem #3 (15 pts) _____

Problem #4 (15 pts) _____

TOTAL (60 pts) _____

1. Assume Tom invests \$ 5000 at 2% annual interest compounded continually.

(a) How much money will Tom have after 3 years ?

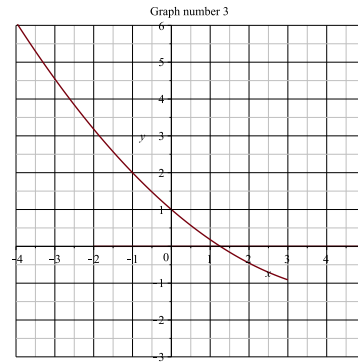

(b) How long will it take for Tom's investment to double in value ?

(c) Assume that Bob also invested \$5000 at annual interest r compounded continuously. Bob's investment doubled in 4 years. What is r ? Give the answer as a decimal.

2. Below is the graph of the function $y = f(x)$ on the domain $-2 \leq x \leq 5$

(a) Which of the graphs below is the graph of $y = 2 + f(x - 1)$? Circle the correct graph.

(b) If the domain of f is $-2 \leq x \leq 5$ what is the domain of the function $\frac{f(3x)+5}{x-1}$?

(c) Compute $f^{-1}(-1)$

(d) If $h(x) = e^{f(x)}$ Which of the values below is closest to $h^{-1}(2)$? Circle the the right answer.

0.6, -1, 2.5, -2, 3.5

3. The population of Townsville was 20000 in the year 2000, 30,000 in 2005 and it is expected eventually to approach (but never exceed) 50,000. Measure time in years after 2000 and population in thousands of people. Find a linear to linear function $P(t)$ that calculates the population of Townsville at time t and sketch a graph of $P(t)$ for $t \geq 0$.

4. You have 300 m of fence to build two fencing enclosures as in the picture below: the first is a rectangle with one side twice as long as the other side. The second is another rectangle with one side three times as long as the other one. For which value of x is the area of the two enclosure minimum ?
