

## HOMEWORK 3 FOR WINTER QUARTER

0. [Required] Algebra and Manipulation Workout:
- (1) Let  $a = p_1b + r_1$ ,  $b = p_2r_1 + r_2$ . Find  $x$  and  $y$  so that  $r_2 = ax + by$ .
  - (2) Compute the GCD of  $2^5 \cdot 7 \cdot 11$  and  $2^3 \cdot 11 \cdot 29$ .
  - (3) Compute the GCD of 3 and 121.
  - (4) Compute the prime factorization of 693.
1. Prove the following facts, where  $a, b, c$  and  $n$  are all integers.
- (1) If  $a \equiv b \pmod{n}$  and  $b \equiv c \pmod{n}$ , then  $a \equiv c \pmod{n}$ .
  - (2)  $a \equiv a \pmod{n}$
  - (3) If  $a \equiv b \pmod{n}$ , then  $b \equiv a \pmod{n}$ .
2. Prove the following facts, where  $a, b, c, d$  and  $n$  are all integers:
- (1) If  $a \equiv b \pmod{n}$  and  $c \equiv d \pmod{n}$ , then  $a + c \equiv b + d \pmod{n}$ .
  - (2) If  $a \equiv b \pmod{n}$  and  $c \equiv d \pmod{n}$ , then  $ac \equiv bd \pmod{n}$ .
3. Show that there are no integers  $x$  and  $y$  such that  $x^2 + 2 = y^2$ .
4. Draw a square grid of length 10 and label the rows and columns  $0, \dots, 9$ . In the  $(i, j)$  spot put the number  $i + j$  in 'lowest form' modulo 10. Draw another grid but this time put  $i \cdot j$  in the  $(i, j)$  spot. Answer the following questions about each of the tables:
- (1) Do any numbers  $0, \dots, 9$  appear more than once in any row? Column?
  - (2) What is the relationship between the  $(i, j)$  spot and the  $(j, i)$  spot in the table?
  - (3) List all the numbers  $i = 0, \dots, 9$  such that there exists some other number  $j = 0, \dots, 9$  with  $i \cdot j = 0$ .
  - (4) List all the numbers  $i = 0, \dots, 9$  such that there exists some other number  $j = 0, \dots, 9$  with  $i \cdot j = 1$ . Compare with the list from the previous part.
  - (5) Compute  $\text{GCD}(n, 10)$  for every  $n$  in the list from part (3).
  - (6) Compute  $\text{GCD}(n, 10)$  for every  $n$  in the list from part (4).
5. (Challenge) Use the Euclidean algorithm to show that, for any integers  $a$  and  $b$ ,  $\text{GCD}(a, b) = ax + by$  for some integers  $x$  and  $y$ .
